PRESS RELEASE

NINE SKY ARROWS FOR AUSTRALIA??

YES

The Australian market has been offered **nine** Sky Arrow aircraft at substantially reduced prices, including a mix of new and second hand aircraft. Geoffrey Hill, a Director for HilAir, is impressed by the factory offering and believes that the Aussie market will respond well, in particular to the six new Sky Arrow 600LSA Light Sport Aircraft. Included in the LSA offer is the new **7hr** endurance Long Range Fuel Tanks (LRFT) at no extra cost.

SPRING STIMULUS PACKAGE

Geoff commented that *"When you consider the current exchange rate plus the extremely competitive pricing offering exception value, particularly for the LSAs fitted with LRFTs then, this is a serious package. The LRFT was introduced at HilAir's insistence with the Aussie tyranny of distance in mind and will allow a great freedom of movement. In June the factory offered eight aircraft but with the inclusion of the ninth and fantastic pricing let's hope that this offer will provide the **Spring Stimulus** for Sky Arrow in Australia."* Hill said.

MANUFACTURER

Iniziative Industriali Italiane S.p.A. (3i), the manufacturer of the Sky Arrow, is no different to any other aircraft manufacturer around the world having had a couple of very tough years. Sales have slumped and 3i are now looking to stimulate the market by offering the nine aircraft currently on the floor at a price that should see them fly out the door.

THE SKY ARROW

The Sky Arrow is a versatile and attractive proposition for operators seeking to reduce operating costs while acquiring the latest advanced technologies at excellent prices.

HilAir
'For the Fun of Flying'

The Sky Arrow is an excellent personal aircraft and is used as a trainer/private hire aircraft around the world. With four already in the region the potential for the Sky Arrow is well recognised. Also available is the Remotely Assisted Working Aerial System (RAWAS), an integrated on-board multi-purpose four sector system for real time or recorded surveillance, environmental sampling (identified as the Environmental Research Aircraft), mapping and monitoring providing rotary wing performances at a fraction of the cost.

FUN TO FLY

Most importantly the Sky Arrow is just great fun to fly.
